1. The original key attributes(PatientID, TestID, Date) must be mandatory, and these attributes can't allow null.

2. Set up the referential integrity for the original key attributes(PatientID, TestID, Date). PatientID and TestID must reference a valid, existing primary key in the parent table (Patient, Test).

3. Make sure the combination of PatientID, TestID and Date in the Result Table is unique. ResultID should be a unique index on the combination of the original key attributes (PatientID, TestID, Date).
